Housing with wash wiper and wall mounting bracket

- Harsh environments may seriously damage delicate electronics and optical parts of cameras and lenses. To avoid this problem, the best solution is a stainless steel camera housing.

We created a line for the wide range of cameras and other similar applications which are too large for 129 series and too small to require 204 series.

This line of housings is the 168 series: a line of camera housings entirely made in stainless steel to completely guarantee an absolute protection from aggressive external agents.

This housing is entirely built in AISI316L stainless steel and has a modern and refined look, which allows this product to be the best choice for every ambient condition.

Due to its competitive price, this camera housing is a perfect replacement even for aluminium housings, if high quality standards are required.

The 168 Series can be brought with many variations and optionals. Two standard lengths are available (500mm and 600mm).

Available optionals:

- Sunshield and thermostatically controlled heater
- Wiper system
- Liquid cooling system
- Germanium window for IR applications
