ABFL-01

Air filtering battery 20-5-0.1 micron

Installation manual
DESCRIPTION

The air filtering battery **ABFL-01** is used together with the air barrier front window flange in order to keep clean the housing's front window, filtering the air from water and oil particles.

The battery is composed by three filters (20, 5 and 0.1 micron) in series, a pressure regulator and a pressure gauge. The water and the oil filtered are collected in 100 cc bowls. The 0.1 micron filter is made up by a microfiber coalescent cartridge which allows a high filtration efficiency of 99.99% on 0.1 μm particles. The regulator filter can keep stable the set pressure regardless of upstream variations. The air filtering battery can easily be installed due to its mounting bracket.

The filtering may be refilled with the microfiber cartridge suitable for the element.

| Prior to installation and operation, read carefully all instructions the in this manual and heed all warnings. |

TECHNICAL DATA

- **Dimensions:** 250X280x100 mm
- **Weight:** 1.5 kg
- **Max input pressure:** 6 atm
- **Gauge pressure range:** from 0 to 6 atm
- **Filters:** 20 micron, 5 micron and 0.1 micron
- **Input connector:** 1/2" GAS
- **Output connector:** 1/2" GAS (with 6 mm ext. diameter hose adaptor)
- **Temperature range:** from +5° to +50°C

MOUNTING INSTRUCTIONS

Place the filter in a suitable location and fix it to the wall using the wall fixing.

Connect the air tube to the filter inlet (as shown in figure) with a 1/2" GAS tube.

From the other side, connect the air outlet with an air tube which has to be connected with the front air flange of the camera housing.

Pay attention to 6 atm maximum inlet pressure.
